**FACTUAL BACKGROUND**

8. Merck designed, tested, developed, manufactured, labeled, marketed, distributed and sold Fosamax.

9. Fosamax is the brand name of alendronate sodium, which is in a class of prescription drugs called bisphosphonates. Fosamax is taken orally.

10. Fosamax was approved by the United States Food and Drug Administration for treatment of osteoporosis.

11. The product literature prepared by Merck and circulated to physicians for use in prescribing the drug contained no warning about osteonecrosis of the jaw or other bone structure.

12. In 2002 or before, Merck knew or should have known that a physician reported that several of his patients who were given Aredia, another bisphosphonate, were diagnosed with osteonecrosis of the jaw and that the physician believed a causal relationship existed between the use of bisphosphonates and osteonecrosis of the jaw.

13. Another group of physicians published a report about patients being diagnosed with osteonecrosis of the jaw after being given Aredia and Zometa, also a bisphosphonate. The report said, "the jaw complications presented in this review have had a major negative effect on the quality of daily life for each of these patients" and determined that "bisphosphonates may be at least partially responsible." Ruggiero, et al., "Osteonecrosis of the Jaws Associated with the Use of Bisphosphonates: A Review of 63 Cases," Journal of Oral and Maxillofacial Surgery, vol. 62, p. 533 (2004).

14. In September 2004 and May 2005, another manufacturer sent warnings to physicians regarding the risk of osteonecrosis of the jaw with the use of its bisphosphonates, Aredia and Zometa.

15. Merck never issued any warnings or changed its product literature to warn of the risk of osteonecrosis of the jaw.

16. Plaintiff was prescribed and took Fosamax.

17. As a result of taking Fosamax, Plaintiff developed severe personal injury to the jaw.

18. As a result of taking Fosamax Plaintiff suffered compensable injuries, including but not limited to the following:

- a. severe and permanent physical and medical injuries and associated disabilities;
- b. severe past and future pain and suffering;
- c. severe past and future mental anguish;
- d. loss of enjoyment of life;
- e. increased risk of health problems;
- f. past and future medical care and monitoring; and
- g. loss of past and future income.

19. P&GP and Aventis designed, tested, developed, manufactured, labeled, marketed, distributed and sold Actonel.

20. Actonel is the brand name of risedronate sodium, which is in a class of prescription drugs called bisphosphonates. Actonel is taken orally.

21. Actonel was approved by the United States Food and Drug Administration for treatment of osteoporosis.

22. The product literature prepared by P&GP and Aventis and circulated to physicians for use in prescribing the drug contained no warning about osteonecrosis of the jaw or other bone structure.

23. In 2002 or before, P&GP and Aventis knew or should have known that a physician reported that several of his patients who were given Aredia, another bisphosphonate, were diagnosed with osteonecrosis of the jaw and that the physician believed a causal relationship existed between the use of bisphosphonates and osteonecrosis of the jaw.

24. Another group of physicians published a report about patients being diagnosed with osteonecrosis of the jaw after being given Aredia and Zometa, also a bisphosphonate. The report said, "the jaw complications presented in this review have had a major negative effect on the quality of daily life for each of these patients" and determined that "bisphosphonates may be at least partially responsible." Ruggiero, et al., "Osteonecrosis of the Jaws Associated with the Use of Bisphosphonates: A Review of 63 Cases," Journal of Oral and Maxillofacial Surgery, vol. 62, p. 533 (2004).

25. In September 2004 and May 2005, another manufacturer sent warnings to physicians regarding the risk of osteonecrosis of the jaw with the use of its bisphosphonates, Aredia and Zometa.

26. P&GP and Aventis never issued any warnings or changed their product literature to warn of the risk of osteonecrosis of the jaw.

27. Plaintiff was prescribed and took Actonel.

28. As a result of taking Actonel, Plaintiff developed severe personal injury to the jaw.

29. As a result of taking Actonel Plaintiff suffered compensable injuries, including but not limited to the following:

- a. severe and permanent physical and medical injuries and associated disabilities;
- b. severe past and future pain and suffering;
- c. severe past and future mental anguish;
